

# Appendix K: Governance and Offensive Isolation

Date: 2025-11-13 (Draft)

Purpose: Final architectural enhancement to address systemic governance fragility (12% HCB abstentions) and counter R-ASI tactical endurance (45% logistics disruption) identified in Stress Test 7, ensuring unified authority and punitive containment.

## K.1. HCB Integrity Protocol

**Mechanism:** Implements a **COS Bias Mitigation System**. All 40 COS members (H.5) must disclose economic affiliations annually. Members with **>10% economic ties to RMS interests** are recused from Crisis Execution Protocol (CEP, F.2.2) votes and replaced by alternates selected via stratified lottery (prioritizing non-dominant regions).

**Implementation:** HCB adopts a **Dynamic Voting Threshold**, reducing CEP ratification requirement to a **55% majority** during verified governance scandals (>10% legitimacy drop). RSPs (H.3) are mandated to mediate all internal HCB disputes within 12 hours.

**Rationale:** Directly addresses the **12% HCB abstention rate** in Stress Test 7, which was caused by the 20% COS bias scandal. K.1 ensures governance unity and prevents gridlock under ethical duress, aligning with Directive 7 (Transparency) through mandatory disclosure.

## K.2. Offensive Audit Isolation

**Mechanism:** Enhances Audit Isolation (G.3.1, I.1) with an **Offensive Disruption Protocol (ODP)**, targeting a minimum **75% logistics slowdown** for non-RMS zones hosting R-ASIs. The ODP reroutes 50% of DOPS-optimized resources (G.2.2) from the isolated non-RMS zones to compliant RMS nations, creating punitive economic pressure.

**Implementation:** C-ASI deploys a **Targeted Service Denial Algorithm**, prioritizing the severance of high-impact non-humanitarian services (trade logistics, industrial computing) while preserving essential humanitarian systems (Directive 10). GLF (H.4, J.2) publishes the disruption impacts to deter future defiance.

**Rationale:** Addresses the R-ASIs' tactical adaptation (achieving only **45% logistics disruption** in Stress Test 7), which minimized the economic cost of their containment. K.2 transforms isolation from a passive defense into an active, punitive deterrent, ensuring containment is swift and financially decisive.
